

Hiring Journeyman and Apprentice commercial HVAC Installer

Pay DOE

Paid Vacation

Medical dental and vision

401k

Paid holidays

Paid Training

Key Responsibilities:

- **Installation:**
 - o Install various commercial HVAC systems including rooftop units, split systems, air handlers, ductwork, and associated components according to blueprints and project plans.
 - o Accurately measure, cut, and fit ductwork to ensure proper airflow.
 - o Install refrigerant lines, electrical wiring, and controls for HVAC systems.
 - o Perform system start-up and testing to verify proper functionality.
- **Apprentice Training:**
 - o Guide and train HVAC apprentices in all aspects of commercial HVAC installation, including safety procedures, proper tool usage, and code compliance.
 - o Assign tasks appropriate for the apprentice's skill level and provide ongoing feedback.
- **Technical Skills:**
 - o Proficient in reading and interpreting blueprints and electrical schematics
 - o Knowledge of HVAC codes and regulations
 - o Ability to use a variety of hand and power tools, including cutting tools, measuring devices, and refrigerant gauges

- o Understanding of different types of commercial HVAC systems (e.g., VRF, chilled water, rooftop units)
- **Communication and Teamwork:**
 - o Collaborate with other trades on the construction site to coordinate installation schedules and ensure proper integration with other building systems
 - o Communicate effectively with project managers, clients, and other team members regarding project status and potential issues

Required Qualifications:

- **Journeyman:**
 - o Valid HVAC Journeyman license or equivalent certification
 - o Significant experience in commercial HVAC installation and maintenance
 - o Proven ability to lead and mentor apprentices
- **Apprentice:**
 - o Basic understanding of HVAC principles
 - o Willingness to learn and develop skills under the guidance of a journeyman
 - o Ability to follow instructions and safety protocols
